

**Introducing new...**

# ULTRA-VIOLET

Clover Chemicals Ltd have added an exciting new product to their range:  
**ULTRAVIOLET cleaner and disinfectant.**

Ultraviolet is a fragrant, dilutable, bactericidal cleaner that is ideal for cleaning washroom areas, floors and other hard surfaces. It has the following benefits:

## Popular fragrance

Ultraviolet is so named because of its distinctive violet fragrance which is new to Clover's range. Research on this fragrance has demonstrated it to be popular across a wide range of establishments.

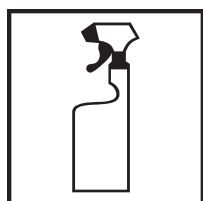

## Easy rinsing

With a very low-foaming formulation, Ultraviolet can be rinsed away from surfaces quickly and easily. The lack of foam also means that Ultraviolet can be used effectively in scrubber driers and flat mopping systems.

## Versatile

A solution of Ultraviolet can be applied by trigger spray, cloth, mop or scrubber drier. Due to its neutral formulation, it can be used safely on any water washable hard surface. This makes Ultraviolet ideal for cleaning and disinfection in a huge variety of applications.

*Ultraviolet is ideal to clean and disinfect all hard surfaces, leaving a pleasant violet fragrance. Perfect for use on washroom surfaces, floors, desks, sports equipment and any other washable hard surface.*
