POOLSIDE CLEANING GOES SWIMMINGLY!

Vitalise and Breaker from Clover Chemicals are the ideal products with which to target health clubs, sports centres and leisure centres.

Clover Chemicals offer two highly effective poolside maintenance products that not only keep swimming pool areas clean, hygienic and slip-resistant, but also lend themselves well to wider use in leisure centres or similar establishments. Vitalise and Breaker have helped Clover distributors to win and keep new customers in the leisure industry. If they do not currently feature in your product range, they could prove to be a valuable addition!

VITALISE: *For daily or regular cleaning*

- Vitalise contains surface-safe acids that safely and effectively clean the poolside area, removing all daily build-up of body fats and water scum.
- It is formulated to a controlled, optimum concentration: strong enough to produce excellent cleaning results, yet mild enough not to create any adverse effects on the pool water.
- The product leaves a slip-resistant and non-irritant finish on tiles, eliminating any potential health and safety risks to users of the pool.
- Vitalise's ultra low-foaming formula facilitates the cleaning operation, as it can be rinsed away quickly and easily using pool water.
- When diluted, Vitalise is ideal for the regular cleaning of changing rooms, shower areas and jacuzzis.

BREAKER: *For occasional deep-cleaning*

- Breaker contains concentrated detergents and acids, resulting in a powerful descaling action for removing even severe water scale and build-up of body fats on an occasional basis.
- This product has a specially thickened formulation. Its viscosity allows for control when cleaning the sides of the pool, thus minimising the risk of pool contamination.
- Breaker is also ideal to be used as a deep-cleaning toilet descaler for stainless steel urinals.
