

EZEE when you know how!

Clover Chemicals' industrial skin cleanser, Ezee, has recently been further developed to produce even better results. The distinctive blue product sells steadily into a variety of industrial establishments, including factories, workshops and garages, and Clover Chemicals is confident that the recent improvements to the product will ensure continued good sales. Distributors selling to clients in this sector, or looking to reach new clients, will find this a useful product to offer.

Thicker formulation

Ezee is now even more effective in use thanks to its new thicker formulation. Due to the increased viscosity, Ezee does not splash or run off hands during washing. It is therefore easier to achieve total coverage of the hands, even the more awkward areas between the fingers, resulting in better all-over cleanliness. The thickness of the product also allows for an economical use, as only a small amount needs to be applied to the hands for excellent results.

Powerful, yet mild, cleaning power

Ezee combines a highly effective cleaning power with exceptional mildness on the skin. Containing a blend of cleansing and conditioning agents, the product emulsifies and removes even stubborn industrial oil, dirt and grease from the hands, without causing any skin irritation or soreness. Ezee has also been designed to be free from abrasives and petroleum solvents, to ensure no harsh effects in use.

Easy-rinse formula

Ezee's formula has been developed so that the lather created is easy to rinse off the hands. This attribute of Ezee also ensures that, when rinsing, the dirt or oil is not redeposited onto the hands.

Practical and hygienic in use

Ezee is available in three pack sizes to suit all needs. The ready-to-use 500ml hand pump is particularly convenient for use in any place where a wall-mounted dispenser can not easily be fitted. Ezee is also available in 1 litre cartridges and 5 litre bulk refill packs for hygienic and economical use through dispensers.

Ezee effectively removes stubborn oils, grease, grime, dirt, creosote and water based paints from the hands, without any harsh effect on the skin.
