

Clover Chemicals launch new carpet cleaner in Orbit!

Clover Chemicals Ltd has relaunched Orbit carpet cleaner after carrying out a major reformulation of the product. The new Orbit, for use in extraction machines, is effectively a completely new product whose formulation involved a lengthy process of research and development. The result is a very effective product that has produced excellent results in testing and has clear benefits for the end-user. Distributors should add Orbit to their range in order to take full advantage of this new innovation and its potential to generate extra sales.

Neutral

With a pH of 7 - 7.5, Orbit is a neutral product which can be used safely on any water washable fabric. It is therefore perfect for cleaning carpets and rugs with a high wool content, for which an alkali cleaner would be too aggressive.

Non-foaming

To ensure trouble-free use in extraction machines, Orbit has been formulated to be completely non-foaming. This means that, when customers use Orbit, there is no danger of them having problems with an accumulation of foam in the machine's collection tank.

Does not separate

When reformulating Orbit, work was also done by Clover's chemists to ensure that the product does not separate at any temperature. This also helps to make it machine-friendly, as there is no risk of the product forming deposits which may block tubes or spray nozzles.

Proven cleaning results

In Clover's testing, Orbit produced excellent cleaning results when used with both hot and cold water. It is also very effective in pre-treating more heavily soiled areas of the carpet - simply spray directly onto the area to help penetrate the dirt before passing the machine over the whole carpet.

Free from enzymes and phosphates

Orbit is a non hazardous, non irritant product, and is now free from enzymes, phosphates and optical brighteners. It is highly recommended for use in establishments such as care homes or schools, where many different carpets may need to be cleaned and where product safety is of great importance.
