

WITHOUT SANEX, UR-INE TROUBLE!

Clover Chemicals has recently made further improvements to the formulation of their odour destroyer, Sanex, to make it even more effective against urine odour. Thanks to this powerful action against urine, as well as several other features translating into real benefits for the end-user, Sanex has a wide potential market whilst selling particularly well into the care sector.

Powerful odour neutralisation

Unlike many air fresheners which mask bad odours with another fragrance, Sanex works by actually neutralising the molecules at the source of the bad odour. It therefore eliminates unwanted smells more effectively.

Colourless

As part of the recent reformulation of Sanex, the product has also been made colourless, eliminating any fear that consumers may have had about possible staining of fabrics.

Odourless

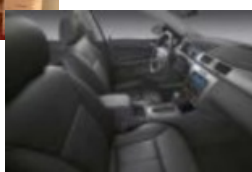

With an odourless product, users can choose either to leave a neutral odour in their establishment or to apply a fragrance of their own choice after deodorising with Sanex.

Versatile

Sanex boasts impressive versatility, as it can be used on any water tolerant surface and lends itself to a wide variety of applications. It is ideal to rid toilet areas of urine smells and can be applied directly onto spillages on carpets and upholstery. As an odourless product, Sanex is also suitable for use in the food industry to deodorise delivery vans, waste bins and food waste chutes.

Ready-to-use formulation

Supplied as a ready diluted product, Sanex is quick and easy to use. It is available in an economical 5 litre pack size or in 750ml trigger bottles for added convenience and speed of use.

Sanex is ideal for use in care homes, hospitals, public buildings, vehicle interiors and hotel rooms.
