

EASY DOSE IT!

Clover Chemicals' new dosing system, Ultra Dose, has been enthusiastically received by distributors and their customers, and has been in great demand since its launch last November. Developed as a particularly cost-effective and convenient alternative to the mains water dependent Ultra Blend 4 system, Ultra Dose has proved popular with many different types of establishment, from nursing homes to upmarket hotels. Clover distributors are finding that the multiple benefits of the Ultra Dose system make it a useful package with which to win new customers.

So what is Ultra Dose?

Ultra Dose is a dosage control system whereby super-concentrated products are dispensed into a trigger spray or a bucket via a dosing pump, before being diluted with water manually.

The system comprises:

- Wall bracket: Available for two or four products
- System board: Identifies each product by name and colour code and indicates the dosage needed for a trigger spray and for a bucket
- 10cc pumps: Long-reach neck allows for easy filling of containers
- RTU labels: 10 ready-to-use trigger spray labels for each product

THE BENEFITS

Customised product selection
Choose products from a range of nine to cater specifically for your customer's cleaning needs

Simplifies product usage for staff
The colour-coded system board and labels clearly distinguish the products and indicate the required dosage

Consistent cleaning results
By following specified dosage rates, products are used at optimum strength every time for best results

Ease of stocking/ reordering
System board clearly shows which products need to be reordered when they are running low

Economical
Minimises product wastage

Environment conscious
Use of super-concentrated products reduces packaging waste and transportation costs. With customers becoming increasingly conscious of the environmental impact of their cleaning systems, this feature of Ultra Dose can be a powerful selling point.

No plumbing
With no mains water connection needed, Ultra Dose can be installed quickly and easily. Ideal for smaller establishments or those with low water pressure.

A convenient and cost-effective dosing system suitable for any establishment!
