

A VANQUISHING ACT!

Sales of Clover Chemicals' heavy duty food plant cleaner, Vanquish, are continuing to grow, with a number of distributors having recently added it to their product range. Vanquish is a particularly powerful and versatile product, designed for the rapid removal of grease, fat and charred food debris from kitchen equipment and surfaces. Ideal for use in all kitchens and industrial food plants, Vanquish can be sold into a variety of accounts and can be a very profitable choice for distributors.

Powerful

Vanquish contains an advanced blend of active ingredients which emulsify and dissolve severe grease, grime and carbon. The clear gel penetrates and softens even baked on deposits, allowing them to be removed easily within a short space of time. Vanquish is therefore essential in food plants where equipment becomes heavily soiled with dried blood, grease, fat or carbonised deposits.

Versatile

Vanquish is suitable for use on all alkali-resistant surfaces and is recommended to clean a wide range of kitchen equipment and surfaces. It effectively cleans hobs, oven interiors, grillpans, deep fat fryers, extraction hoods and filters, tiled floors, walls and splash backs. A small amount of Vanquish can also be poured down drains on a daily basis to prevent the build-up of fats and grease.

Viscous gel

The formula of Vanquish is made to a carefully controlled viscosity, to ensure a more controlled application. As a viscous gel, Vanquish clings to the surface for a prolonged contact time, ensuring effective cleaning. This makes difficult surfaces such as oven walls easier to clean.

Vanquish is the ideal product for heavy duty cleaning in all kitchens and food plants.

Solvent-free

Unlike many harsh industrial oven cleaners, Vanquish is free from solvents. This means that users are not at risk from inhaling dangerous fumes. It is also completely water soluble, making it easy to ensure that all traces of the product are rinsed from the surface after use.
